The Epicooler Portable AC is a compact, lightweight, personal cooling device designed to provide quick relief from heat. Unlike traditional ACs that require installation, electricity-heavy compressors, and professional maintenance, Epicooler works on evaporative cooling technology, which uses water and air movement to drop temperatures in your immediate surroundings.

It is small enough to sit on a desk, bedside table, kitchen counter, or even be carried around. It is specifically made for those who want:

- Instant cooling in a personal space
- A portable air-cooling solution
- An energy-saving alternative to AC
- Relief during heat waves or power bills spikes

Epicooler functions as a 3-in-1 device:

##### 1. Air Cooler – Cools the air using evaporative technology

##### 2. Air Humidifier – Adds moisture to the air
