 What is Emsense?

Sales administrator
 Sales jobs

Emsense is a compact, wearable EMS wellness device created to stimulate muscles using low-
 Preferred work location Kathu
 frequency electrical impulses. These impulses mimic the natural signals sent by the brain to
 muscles, causing them to contract and relax in a controlled manner.

Contacts and general information about me

Unlike traditional exercise equipment or massage tools, Emsense focuses on neuromuscular

 Understanding EMS Technology [Sign in](#)

To understand how Emsense works, it's important to know the basics of EMS technology.

Electrical Muscle Stimulation has been used for decades in physical therapy, rehabilitation, and
 sports training. EMS devices send gentle electrical pulses through the skin to stimulate muscle
 fibers. These pulses cause involuntary muscle contractions, similar to those produced during
 physical exercise.

Key principles of EMS include:

- Activation of deep muscle fibers that are difficult to engage through normal movement
- Improved blood circulation in the targeted area
